For gentle motion, vigorous mixing or intensive shaking - you can choose between 15 quality products and five different types of shaking motion.
Quality built on Tradition

Users in research labs, standard and special labs for medicine, science and industry throughout the world have been profiting from the precision and dependability of our products for more than 45 years, all of which comply with valid European standards and bear the CE mark.

In the future, the success of a product spectrum of laboratory devices that meet the toughest demands on material, functioning and design will continue to be ensured by experience of every-day use in detail, ongoing technical advances and an excellent quality approach.

The phrase „Quality built on Tradition“ encompasses more than just the sum of impressive product innovations. It is also an expression of our corporate policy, which includes a high degree of ready-and-waiting service as our primary customer-friendly service goal.

This applies to all of the GFL laboratory products that are produced exclusively at our plant in Germany - Deep Freezers, Shaking Water Baths, Water Baths, Incubators, Water Stills or Shakers alike.

Secure future

A vested quality demand in accordance with international standards is documented for all GFL laboratory products with the certification to DIN EN ISO 9001:2008, promoting more trust in the permanent high quality level of our products.

In addition to the continuous optimisation of ongoing production processes, the ISO obligation also calls for the commitment to quality awareness of our employees and the continuous development and rapid implementation of preventive measures to ensure quality assurance at a high level.
GFL Shakers with the model designation 3012, 3014, 3017, 3018 and 3020 are equipped both with microprocessor technique and with an interface module for convenient data control by I&C tasks via PC.

Trouble-free data transfer is realised via the built-in RS 232 port, making all of the units cited above compatible simultaneously, for example, to the PC software labworldsoft®.

Using this software, up to 64 lab devices, among other things, can be controlled independently of one another from a PC and all data evaluated. Specified and actual values are available as output signals.

Data acquisition is effected online and can be presented either graphically or numerically. Complete instrument configurations can be stored with all of their current parameters for optimum reproducibility. This allows you to call up pre-configured instrumentation flow diagrams that are immediately ready for operation for the most varying of tasks.

System requirements:

Hardware
- Pentium 90 with at least 16 MB RAM, 8 MB free disk space, mouse
- VGA display; monochrome display with at least 16 grey levels, or colour

Software
- Windows 95/98/2000/NT/ME/XP...

There are 15 different model variants of GFL Shakers with five types of motion. All of these models have the CE mark and are maintenance-free.

All of the device models are controlled either digitally or by analogue means. Their stable, low-wear drive mechanisms ensure a particularly smooth working motion and dependable, long-term service. The electronic system controls the soft start-up of the devices.

GFL Shakers are marked by their capability to easily accommodate and fasten to the shaking platform almost all shapes of vessels used in standard laboratory applications, thanks to the variety of accessories available for the devices.

The accessories shown in the product illustrations in this catalogue are not part of the standard scope of supply for the devices. All designs are subject to change. Special devices available on request.
